
Fibre via Wireless

The Jenny Fibre via Wireless product provides your company with fibre speed connectivity without fibre.

Our wireless network is built to a standard that enables us to provide a dedicated throughput at a set contention ratio (the number of others sharing the Internet feed) at our core.

This service is available in the centre of Mbabane or in the middle of the bush. We can offer this to your business wherever we have a wireless network. We have three different Fibre via Wireless services available.

- Dedicated throughput.
- High speed with very low latency.
- Low contention ratio. (The amount of other users sharing the same bandwidth supply as your company).
- Static public routable IP address included. (you can purchase more IP addresses).
- Jenny Business SLA.

Why shaping is necessary for an ISP ?

No Shaping

A totally unshaped Internet connection is usually advertised as an advantage but its NOT. If your connection is being abused, the service you want to use online will not necessarily work correctly. This means your ISP's network is also not managed optimally.

ISP Blanket Shaping

ISPs with the right equipment try to shape your connection so that you get an overall good Internet experience. This does not work because the provider does not know how you use your Internet. They largely guess what you use it for. For example, if you are a gamer and the rest of your family is watching videos on Facebook, this will result in high late

Jenny Priority Flow

We provide you with a control panel to shape your own Internet for optimal performance.

Here are the default settings and options available for the different services.

[Jenny Priority Flow PDF Document](#)

Example Gamer

Simply log into your My-Jenny control panel and tick boxes to change your shaping on your Internet connection.

If you are a gamer and have other people using Netflix and YouTube in your household.
You can select: [x] Gaming High Priority
This will allow games to get first priority on the Internet connection then Netflix and Youtube can use the rest.

Pricing

	Silver	Gold	GoldPlus
Contention	6:1	3:1	1:1
3 Mbps	E 2999.00	E 6299.00	E 6899.00
